

TAKING CARE OF YOUR NEW WOODTECH FURNITURE The surface of your new furniture is architectural grade veneer with an edge band of solid hardwood stained and finished with multiple coats of catalyzed lacquer. The finish is very durable and will look great for many years with a minimum of attention.

- In most instances, the only cleaning that is necessary is with a clean, soft cloth dampened with plain water.
- Occasionally, it may be necessary to use a mild soap such as Murphy's Oil Soap to clean pizza sauce or other greasy deposits that don't fully respond to water.
- Do not use window cleaner or kitchen spray cleaners such as Fantastic or 409.
- Do not use paper towels or other materials that may actually scratch the surface.
- Do not use Pledge or other similar products; they leave an oily residue.
- Soda cans or cups may be placed directly on the surface. Condensed moisture – sweat from these items will not leave white rings behind.
- The use of coasters or napkins is recommended. Although the moisture from cans and cups won't damage the surface, sliding soda cans etc. might leave minor scratches.
- Spills of water, soda, beer or alcohol will not damage the surface.
- Avoid leaving hot things in prolonged contact with the surface. Coffee pots and pizza boxes should not be left on the table for extended periods. Prolonged contact with moist heat will damage the surface. Damage of this type is rare; but it can happen.
- The use of trivets is strongly recommended under hot items.
- To add shine to your furniture, polish with lemon oil. However, lemon oil is not recommended for daily use. We do not recommend waxing or rubbing the surface with any type of abrasive.
- Ink marks can be easily removed by rubbing the stained area with a pencil eraser.

Enjoy your new furniture. In general, with a minimum of care, it will look great for a very long time.
